

## LINCESNGEESHAFTHREDOER

A machine used in the recycling industry to break or cut materials into smaller pieces so that they can be processed and recycled more effectively. These shredders can be used to recycle a wide range of materials, including plastics, metals, textiles and more. In addition to reducing the size of the material, it also helps to separate the components of the recyclable material, which facilitates further processing and recycling.

The Lince universal shredder has been designed to offer the highest possible versatility, capable of shredding a myriad of different materials to the customer's desired size. With a design that has been refined throughout our history, it features advanced technology, manufacturing, programming, ease of use and maintenance.

## ROBUST DESILCN:

Our single-shaft shredder is designed with high quality, durable materials to withstand wear and abrasion during prolonged use.

## HIGH EFFICIENCY:

It can process different materials at a constant rate, thus reducing production time and costs.

## KNIVES:

It has sturdy knives, which are responsible for cutting and tearing materials into smaller pieces.

## HICH PROCESSING CAPACITY:

It can process large quantities of materials in long working day.

## SAFETY AND SECURTTY:

The primary shredder has integrated safety systems that protect workers during use.

## LOW MANTENANCE:

This type of machine is easy to maintain and does not require much maintenance, which contributes to lower operating costs.
